

Data-to-Visualisation Development Guide

1. Available Data

- **National hospitalisation injury data**

Contains annual road crash hospitalisations, bed days, road user groups, age groups, sex, remoteness areas, and injury-related categories for Australia from 2011 to 2021.

- **State and territory hospitalisation injury data**

Contains hospitalised road crash injury records by Australian state and territory, including annual totals, road user groups, age groups, sex, counterparty, and bed days.

- **First Nations hospitalised injury data**

Contains hospitalised road crash injury data comparing First Nations peoples and Non-Indigenous Australians, including annual totals, road user groups, age groups, remoteness areas, counterparty, and bed days.

2. Data to Produce

- **National trend dataset**

Annual hospitalisations, bed days, and average bed days per case from 2011 to 2021.

- **Road user dataset**

Hospitalisations by year and road user group, including percentage share and change from 2011 to 2021.

- **Age group dataset**

Hospitalisations by year and age group, including percentage share and change over time.

- **State and territory dataset**

Hospitalisations by year and state/territory, including absolute change and percentage change from 2011 to 2021.

- **First Nations comparison dataset**

Annual hospitalisations for First Nations peoples and Non-Indigenous Australians, including indexed growth from 2011.

- **Remoteness comparison dataset**

Hospitalisations and percentage share by remoteness area for First Nations peoples and Non-Indigenous Australians.

3. Interface and Visualisation Use

- **Homepage overview**

Use the national trend dataset to show KPI cards and a line chart of hospitalisations over time.

- **Road user analysis section**

Use the road user dataset to show a horizontal bar chart ranking road user groups, with emphasis on car drivers, motorcyclists, and pedal cyclists.

- **Age pattern section**

Use the age group dataset to show a heatmap, with years on one axis and age groups on the other.

- **State comparison section**

Use the state and territory dataset to show a horizontal bar chart comparing percentage change across states and territories.

- **First Nations comparison section**

Use the First Nations comparison dataset to show a line chart of indexed growth, comparing First Nations peoples with Non-Indigenous Australians.

- **Remoteness equity section**

Use the remoteness comparison dataset to show a grouped bar chart comparing Major Cities, Regional areas, and Remote areas between the two population groups.
